

Evidence Case Canvas: What evidence would justify a claim about psychology or social safety?

Bounded Claim

[Who] can [do what] without [what harm] when [context], over [time scale].

First Draft	Revised Claim	Enough Evidence?
-------------	---------------	------------------

What is the concern, for whom, and over what time scale? What could go wrong in this interaction? Who is affected? Who might apply pressure through the robot? Whose account of harm is this based on? How would you check it with them?	What robot and human evidence would support or challenge the claim? <table><tr><td></td><td>Supports</td><td>Challenges</td></tr><tr><td>Robot</td><td>Logs, behaviour, policies</td><td>Failures, misreadings</td></tr><tr><td>Human</td><td>Experience, behaviour, reports</td><td>Avoidance, workarounds, distress</td></tr><tr><td></td><td>Robot observed Robot inferred</td><td>Robot did Human consequence</td></tr></table>		Supports	Challenges	Robot	Logs, behaviour, policies	Failures, misreadings	Human	Experience, behaviour, reports	Avoidance, workarounds, distress		Robot observed Robot inferred	Robot did Human consequence	What information is necessary, and what should remain private? Minimum data for the claim Not collected, not shared, only with cons. Not collected, not shared, only with cons.
	Supports	Challenges												
Robot	Logs, behaviour, policies	Failures, misreadings												
Human	Experience, behaviour, reports	Avoidance, workarounds, distress												
	Robot observed Robot inferred	Robot did Human consequence												
How could the interaction/safeguard tested? Method, setting, participants Which safeguards are tested directly? Withdraw or narrow claim if ...		What remains uncertain, and who can intervene? Still uncertain Who can intervene How (stop, pause, override) What does the claim deliberately leave out?
